About Me

I am a user experience and product designer, based in **Vancouver, Canada.** I've recently graduated from Simon Fraser University's school of interactive arts and technology, where I concentrated in **Design** and **Interactive systems**. Since then, I have been working part-time as a Freelance designer.

My mixed education, as well as my interest in trades, allows me to visualize solutions from different perspectives. I'm ecstatic when it comes to learning new skills and growing as a designer/human.

"I'm living in the present, but I'm looking forward to what my future entails."
