

Card trick

Rubik's cube box - number of configurations?!?

Counting number of ways to **assemble** the Rubik's cube (illegal cube group)

Swap:

- 2-cycles generate all permutations
- 3-cycles don't
  - 3-cycles generate "even" permutations
- define "odd" and "even" permutations
- 4-cycles are odd

Counting number of ways to **configure** the Rubik's cube (legal cube group)  
ingredients:

- number of edge flips must be even
- number of corner rotations must be  $0 \pmod 3$
- only half the total number of permutations is possible

How big is this number?

Recent developments in Rubik's cube

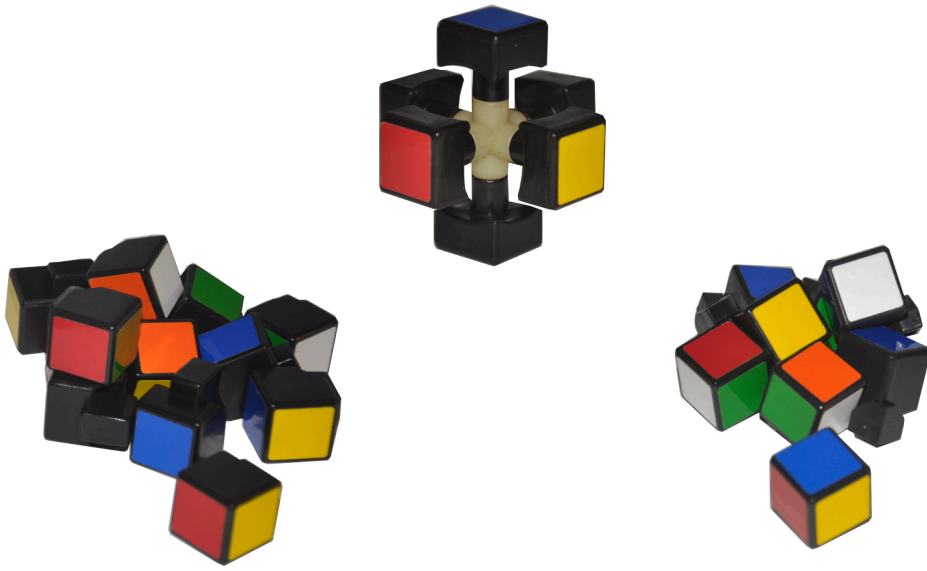

- god's number is 20

Over 1 cup of coffee  
sold per year

distance from earth to moon: over 3cm

How many ways are there to assemble Rubik's Cube?

## The Swap Puzzle:

Rules (legal moves): Pick any two boxes and *swap* the contents.

Goal: Start with the tiles randomly arranged in the boxes, then try to put them in their proper order using legal moves.

Here are some initial configurations to try.

**Variation 2:**

Legal Moves - *Swap* the contents of any box with box 1.

**Variation 3:**

Legal Moves - Pick any 3 boxes, and shift the contents either left or right one box. (we call this move a *3-cycle*)

How many configurations are there of Rubik's Cube?

The number of different configurations is

$$43,252,003,274,489,856,000 \approx 4.3 \cdot 10^{19}$$

*Ideal Toy Company stated on the package of the original Rubik cube that there were more than **three billion** possible states the cube could attain. It's analogous to MacDonald's proudly announcing that they've sold more than 120 hamburgers.*

(J. A. Paulos, Innumeracy)

How big is this number?

- lined up end to end  $\sim 2.4 \times 10^{15}$  km  $\approx$  255 light years
- cover the earth's surface to a height of 15 m.
- red blood cells in human body  $2 \cdot 10^{12}$
- grams of sand on earth  $10^{24}$
- Earth's population ( $7.13 \cdot 10^9$  people) each put a cube into a new configuration every second, for one year, only  $2.3 \cdot 10^{17}$  different cubes could be produced.
- 350 million cubes sold since 1980.

suppose every cube existed in 1980 and for the past 35 years took on a new position every second. The total number of different configurations is

$$\begin{aligned} & [350 \text{ million}] [\text{seconds in a year}] [35] \\ & = 3.86 \cdot 10^{17} \text{ configurations} \end{aligned}$$

## “God’s Number is 20” (Summer 2010)

Every position of Rubik's Cube can be solved in 20 moves or less.

Date	Lower bound	Upper bound	Gap	Notes and Links
July, 1981	18	52	34	Morwen Thistlethwaite proves <a href="#">52 moves</a> suffice.
April, 1992	18	42	24	Hans Kloosterman improves this to <a href="#">42 moves</a> .
May, 1992	18	39	21	Michael Reid shows <a href="#">39 moves</a> is always sufficient.
May, 1992	18	37	19	Dik Winter lowers this to <a href="#">37 moves</a> just one day later!
January, 1995	18	29	11	Michael Reid cuts the upper bound to <a href="#">29 moves</a> by analyzing <a href="#">Kociemba's two-phase algorithm</a> .
January, 1995	20	29	9	Michael Reid proves that the "superflip" position (corners correct, edges placed but flipped) requires <a href="#">20 moves</a> .
December, 2005	20	28	8	Silviu Radu shows that <a href="#">28 moves</a> is always enough.
April, 2006	20	27	7	Silviu Radu improves his bound to <a href="#">27 moves</a> .
May, 2007	20	26	6	Dan Kunkle and Gene Cooperman prove <a href="#">26 moves</a> suffice.
March, 2008	20	25	5	Tomas Rokicki cuts the upper bound to <a href="#">25 moves</a> .
April, 2008	20	23	3	Tomas Rokicki and John Welborn reduce it to only <a href="#">23 moves</a> .
August, 2008	20	22	2	Tomas Rokicki and John Welborn continue down to <a href="#">22 moves</a> .
July, 2010	20	20	0	Tomas Rokicki, Herbert Kociemba, Morley Davidson, and John Dethridge prove that God's Number for the Cube is exactly 20.

Tomas Rokicki: programmer from Palo Alto, California  
 Herbert Kociemba: math teacher from Darmstadt, Germany  
 Morley Davidson: mathematician from Kent State University  
 John Dethridge: engineer at Google in Mountain View
